

# GPSDOME ANTI-JAMMER

## COMPACT GPS JAMMING PROTECTION

### GPSdome: Industry's Only Non-ITAR GPS Anti-Jammer

GPSdome is a small-sized, add-on device that provides protection against GPS jamming, ensuring continuity of autonomous navigation and operation during jamming conditions. No other solution that offers such protection is as small, light, affordable or as easily installed as GPSdome.

### Features

- Null steering technology
- Small form factor: 70 x 48 x 24mm, 150g
- Minimal power consumption: <0.8W
- IP67, -40°C to +85°C
- Protected frequency: GPS L1 (C/A Code)
- Passthrough frequencies: GPS L2 & Glonass R1
- Latency: 100ns +/- 15ns (fixed)
- Insertion loss: 6.5 dB +/- 2 dB

**Safran Electronics & Defense is with you every step of the way, building in the intelligence that gives you a critical advantage in observation, decision-making and guidance.**

## How GPSDome works

**The Vulnerability of GNSS** is well known. Orbiting at 20,000km, the GNSS satellites emit a signal which is incredibly weak when received by GNSS receivers (~-125dBm). To jam or spoof this signal all one must do is overpower it, either with a simple jammer bought online which blocks it completely or with a spoofer, a slightly more sophisticated signal which can trick it with erroneous data.

**The Null Steering Algorithm** was originally developed for military applications to protect wireless signals. GPSdome adds our own sophisticated algorithms and proprietary RFIC to detect suspicious signals, combine antenna patterns and precisely target a null in the direction of the hostile signal.

**Installation Couldn't Be Easier.** After mounting the 2 antennas on a flat, sky-facing base with at least 10cm separation (optimally > 25cm), connect antennas to GPSdome, connect it to the antenna input on your GNSS receiver, feed it with power and you're set to go.

**GPSdome is Completely Standalone.** GPSdome is compatible with any GNSS receiver on the market and compatible with any off-the-shelf GNSS antenna. GPSdome does not include the GNSS receiver or the antennas.

**Jamming / Spoofing Detection** is available from an LED on the GPSdome itself or via an external wire that could be integrated into any system computer. An optional ComModule could be added to enable attack alerts to be sent to infiniDome's GPS Cyber Security Cloud.

## Technical Specifications

Physical	
Enclosure	70 x 48 x 24 mm (excluding mounting lugs)
Weight	150g
Mounting	4 x M3 bolts (not supplied)
Environmental	
Operating Temperature Range	-40°C to 85°C
Protection	IP67
RF Interfaces	
Antenna Connectors (P/A)	50Ω SMA 2.75VDC designed for 26dB ±2dB gain
Receiver Connector (R)	50Ω SMA Requires *3.3VDC–32VDC 0.75W <small>*not for EPS option</small>

Performance	
Protected Signal	1575.42 MHz (GPS L1 C/A Code)
Passthrough additional 2 GNSS signals	GPS L2 & Glonass R1
Latency	100ns ±15ns (fixed)
Compression Point	25dBm
Insertion Loss	6.5dB ±2dB

Safety & Compliance	
R&TTE 1999/5/EC : EN60950-1, EN301 489-1, EN301 489-3, EN300 440-2	
RoHS compliant	CE Compliant (PPS Version)
WEEE registration number WEE/GK2929WW	

EPS Wire Connection	
Red Wire: 3.3VDC – 32VDC	
Black Wire: GND	
Brown & White: Dry contact NO interference indication	

## Ordering Information

Product Name	Product Number	Description
GPSdome V1.03- <b>EPS</b>	1036	GPS L1 Protection, R1 & L2 Passthrough. External Power & Interference Indication Over 3 Wire Cable. Loss Compensation.
GPSdome V1.03- <b>PPS</b>	1037	GPS L1 Protection, R1 & L2 Passthrough. Phantom Power Supply Over (R) RF connector. Loss Compensation.

**POWERED  
BY TRUST**
